

ReNew: Policy Renewal Manager

Streamline renewals by programatically re-quoting with current policy details.

InsureZone's ReNew tool is used to automatically requote policies not sold in a prior term.

Programmatically Requote Policies that have been previously quoted but not sold. Policies are automatically requoted 45-90 days prior to the expected renewal date using the prior year's application. When your insured is ready to purchase a policy that you've requoted, just open the prior year's application, make any necessary changes, and move forward to binding the policy.

Dedicated Requotes Tab on the agency dashboard flashes when a new quote is available for review.

Generate a Bindable Proposal straight from your agency dashboard, all without logging into the carrier's site.

Re-Quoted Apps	Manual action	No Appetite
We have obtained a premium indication from at least one carrier based on a submission from last year for the following clients. At least one line of business from the earlier submission was not sold, and may represent an opportunity for your agency. Click the client name to see a comparison of underwriting results for the re-quoted application with last year's submission.
