AL3 Now is a database repository that uses a Microsoft SQL Server Database to store all AL3 records received from carriers via an IVANS download. The purpose of the database and this service is to make policy history available outside of any agency management system.

AL3 Now is an integral part of the ReNew tool offered by InsureZone. The most accurate record of the policy when it comes time to requote or remarket, is a combination of the AL3 data and the original application submitted by the insured.
